Version Control

Client User Guide

Connecting to Stoneweave from your workstation

June 2026 V1.0

1. What the Client Application Does

The Stoneweave Client is a small launcher application installed on your workstation. When you double-click its icon, it opens the Stoneweave server in your web browser automatically - just like a bookmark, but built into your desktop.

Nothing is stored on your PC - all files, versions, projects, and history live on the server. The client simply remembers the server address so you never have to type it.

Tip

You do not need to install Python, a database, or any other software. The client installer handles everything.

Before You Start

- The client installer: PLCVersionControl-Client-Setup.exe (provided by your admin)
- The server address - for example `http://192.168.1.105:5000` (ask your admin)
- Your login credentials - username and password (provided by your admin)

2. Installing the Client

1. Double-click PLCVersionControl-Client-Setup.exe.
2. If a Windows SmartScreen warning appears, click More info then Run anyway.
3. Accept the Licence Agreement and click Next.
4. When prompted, enter the server address your admin gave you (e.g. `http://192.168.1.105:5000`).
5. Click Install, then Finish.

A shortcut is added to your desktop and Start Menu. Double-click it any time to open Stoneweave.

Note

Standard user rights are sufficient - no administrator or elevated permissions are required.

3. Connecting for the First Time

1. Double-click the Stoneweave shortcut on your desktop.
2. Your default browser opens the server login page.
3. If the browser shows a security warning such as 'Your connection is not private', click Advanced then Proceed. This is expected when using a self-signed certificate - ask your admin to confirm it is your server.
4. Enter your username and password.
5. Tick Remember me to stay logged in between sessions.
6. Click Log In.

Recommended Browsers

Browser	Status
Microsoft Edge	Recommended on Windows
Google Chrome	Fully supported
Mozilla Firefox	Fully supported
Internet Explorer	Not supported - use Edge instead

4. The Everyday Workflow

Here is the typical process for making a change to a file:

1. Double-click the Stoneweave shortcut to open the system.
2. Navigate to your project (sidebar → Projects) or click Files to see all files.
3. Find your file and check its status:
 - Green - available, you can check it out
 - Orange lock - checked out by someone else (shows their name and when they checked it out)
4. Click Check Out, enter a reason for the edit, and click Check Out & Download.
5. The file downloads to your PC. Open it in your software (Studio 5000, TIA Portal, AutoCAD, etc.).
6. Make your changes and save with the same filename.
7. Return to Stoneweave - the file will show 'Checked Out by You'.
8. Click Check In, upload the file, select a change type, write a change description, and click Check In.

Tip

Done - a new version is created and the file is available for others.

5. When a File Is Already Checked Out

If someone else has the file checked out you cannot edit it until they release it. The file page shows their name and how long they have had it.

- Contact them directly and ask them to check it in when finished.
- If they are unavailable, ask an admin to Force Unlock the file. This is a last resort - any unsaved changes on their PC will be lost.

6. Viewing and Downloading Old Versions

1. Open the file from the Files list or project view.
2. Scroll down to Version History.

3. Click any version row to open its detail page.
4. Click Download vX to download that version.

Note

Downloading an old version does not change the system. If you want to roll back to an older version, ask a supervisor or admin to use the Revert feature.

7. Your Workstation Name

When checking out a file you can enter your workstation name (e.g. your PC name or desk number). The system saves it for next time. This helps colleagues and admins see which machine has the file.

To update it: clear the Workstation field on the next check-out form and type the correct name.

8. Sessions and Logging Out

- If you ticked Remember me, you stay logged in even after closing the browser or restarting your PC.
- Closing the browser does NOT check in any files. Files stay checked out until you explicitly check them in.
- To log out: click your name in the top-right corner → Log Out.

9. Using Without the Shortcut

You can access Stoneweave from any browser on the same network - the launcher is not required. Type the server address directly into the browser address bar (e.g. <http://192.168.1.105:5000>) and bookmark it for easy access.

10. Common Questions

Question	Answer
Can I check out the same file twice?	No - the system prevents this automatically.
What if I downloaded the wrong file?	Click Cancel Checkout on the file page. No new version is created and the file is immediately available again.
Can I see old versions?	Yes - open the file, scroll to Version History, and click any version row.
Can I get back an old version?	Ask a supervisor or admin to Revert to the version you need.
Can I attach a change sheet?	Yes - the Change Detail Document field on the check-in form accepts PDF, Word, and image files.
The file is stuck checked out but nobody is using it - what do I do?	Ask an admin to Force Unlock the file.
Can I access the system from home?	Only if the server is accessible over the internet or via VPN. Ask your IT admin.
What if I forget my password?	Click Forgot password? on the login page, or ask your admin to reset it.
Do I need to install anything else?	No - just the client installer. Everything else runs through the browser.
